

PROI Map

In Example directory you can see prepared html file, with PROI Map.

You need to perform few steps to set up this map on your page:

1. Copy the 'proi-map' directory to the document root of your website.
2. Copy the libraries section to the HEAD section of your website. Don't forget to paste in the google api key to the first library. If you don't have google API key, you can find out how to get one in here:

https://developers.google.com/maps/documentation/javascript/tutorial?hl=pl#api_key

Also remember to change libraries path in the HEAD section if you want to place it somewhere else.

3. Place the "mapGN" div container wherever you want it to be ☺
4. You can adjust the dimensions of the map by setting the CSS

I hope it works ☺

Updating the map:

We will try to keep all the location in GIT Repository up to date, although we don't take responsibility for updating the locations on the map. To update locations on your own so you have to:

1. Open the proi-map.js file, locate the places table, and add new entry at the end. The entry should look like this:

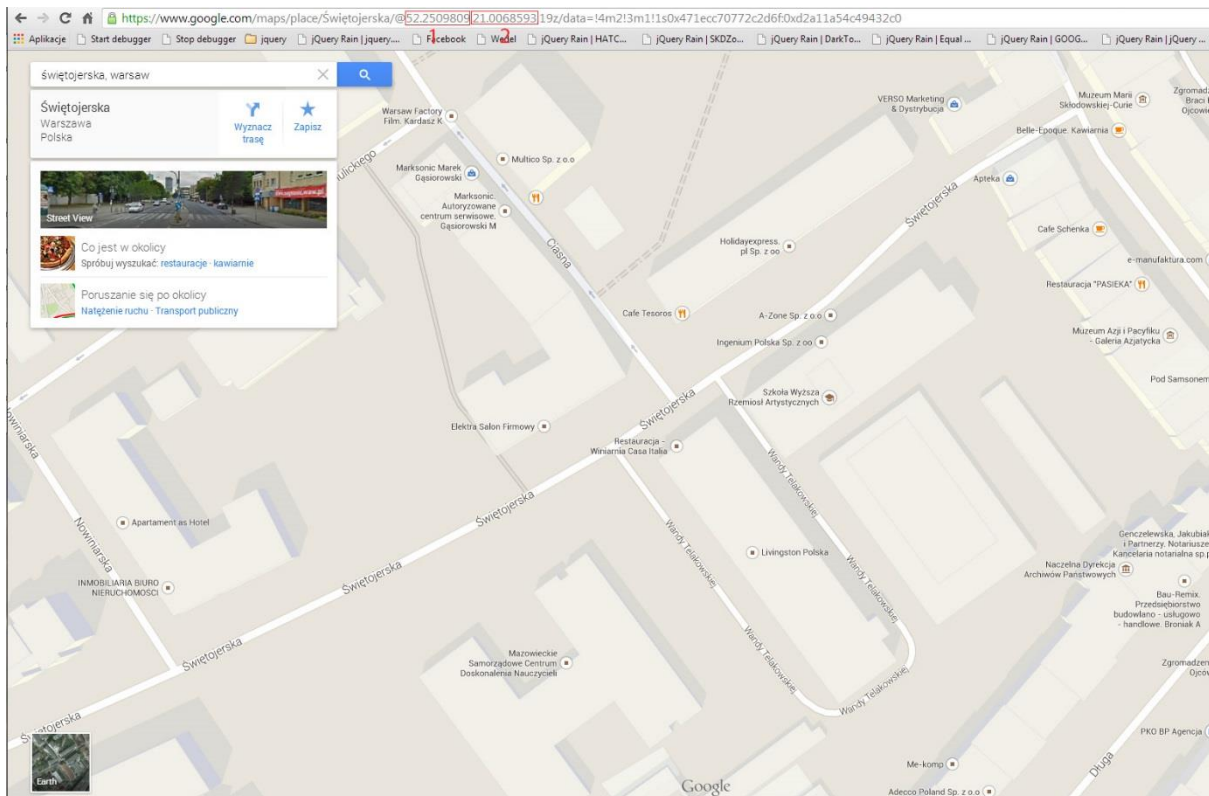

```
place('Poland', '24/7Communication', 'Warsaw', 'Swietojska 5/7',  
'www.247.com.pl', 52.2510278, 21.00674920000006)
```

Parameters: Country, agency name, city, address, www address, latitude and longitude.

First 5 arguments are used to show informations in infobox (when pin clicked).

2. To find the last to arguments, you have to find the location in google maps:

Find the location on google, center the map and copy latitude(1) and longitude(2) from the address bar.

3. You also are able to change the font of the infobox, by editing the prio-map.css file. Moreover, you can change the map pin images by replacing the files in proi-map/images directory.

Don't hesitate to contact me if any help needed!
